

January 1, 2011

To Whom it May Concern:

The active ingredient in all Aquabac and Vectobac formulations is identical. It is *Bacillus thuringiensis* subspecies *israelensis*. The products have the same potency and are used at the same rates per acre. The difference in the concentration of the active ingredient on the labels is due to the fact that the technical grade active ingredient in the Aquabac products has a higher potency than the Vectobac technical grade material so less is required to provide the label potency. In all other respects, the products are identical.

If necessary we can provide a genetic profile comparing the active ingredients in the products.

Sincerely,

Terry L. Couch, Ph.D.
